

**Now it is possible to make pure, tasty, and healthy water at home**

# Kangen Water

Water makes up approximately 70% of the human body and is the source of all life and has deep connections to health and beauty.

Leveluk DX (Continuous Electrolysis Water Generator) is a product approved as a Medical Device by the Japanese Ministry of Labor and Welfare.

Unlike simple water purifiers that **only** filter harmful materials from tap water, Leveluk DX uses a unique electrolysis process that produces a wide range of Kangen and Acidic waters for numerous uses such as: cooking, drinking, cleaning, and cosmetics.

## **PURE, FRESH DRINKING WATER**

Leveluk DX creates smaller the groups of water molecules (clusters) that taste better than other filtered water. The reason Kangen water tastes so good is that the large clusters in tap water are broken down (into smaller ones) through the electrolysis process.

## **FOR WATER THAT YOU CAN RELY ON TO REDUCE FREE RADICALS**

**"Free radicals are the root of all disease"** This fact is drawing increasingly attention in the media and in nutritional circles. When free radicals increase in the body, they can damage DNA, which is the main cause for many types of diseases. Furthermore, the very sources of those free radicals are things that we are surrounded with in our daily lives such as alcohol, cigarettes, electromagnetic waves, and tap water. However, one thing that we can count on help us reduce free radicals is Kangen water produced from the electrolysis of tap water. It should be noted that "kangen", or "reduction" in Japanese, is the opposite of oxidation. Avoiding the oxidizing effects of free radicals in the body is essential for your health.

## **FOR USES IN EVERYDAY CLEANING AND HYGIENE**

Leveluk DX can also produce water that is great for cleaning kitchen items such as knives and cutting boards, and washing hands (Strong Acidic Water) as well as water that can easily remove tough oil and grease stains (Strong Kangen Water). Thus, another appeal is that you can greatly reduce the use of strong detergents and other cleansing agents, a change in lifestyle both revolutionary and beneficial to the environment.
